

Sound Beacon

What is it?

The Sounder Beacon combines visual indication together with a loud siren in order to alert people with hearing or visual impairments to a certain type of alarm activation (eg smoke detector) or to an incoming telephone call. The Sounder Beacon can be connected to the Lifeline Vi, Lifeline Vi+ or other Tunstall telecare enabled systems.

Two colours are available in order to differentiate between alarm types.

How does it work?

When activated, the Sounder Beacon will flash and generate a sound to alert the user of the present situation.

Why is it needed?

Visual and audible alarms can provide important feedback for users with hearing or visual impairments. These can indicate circumstances such as a caller at the communal door when used in connection with a scheme, or the activation of telecare sensors e.g. Smoke Detectors.

Who is it for?

The Sounder Beacon is for anyone who requires additional notification of alerts generated by telecare sensors.

Features and Benefits

- **Local visual and audible reassurance** -allow those with visual and hearing impairments to have enhanced user feedback
- **Choice of two colours** - to allow users to differentiate between types of call
- **Sounder can be disabled** - for specific installations tailored to individual needs

Why Tunstall?

We focus on using the latest digital and mobile technology to enable people to feel safe, secure and independent, giving them the freedom to live the life they choose. Our products combine se-cure digital connectivity and mobile platforms.

We help you provide...

- **Intelligent, unobtrusive, person centred care.**
- **Personalised, proactive and predictive services to improve quality of life.**
- **Integrated health, housing and social care.**
